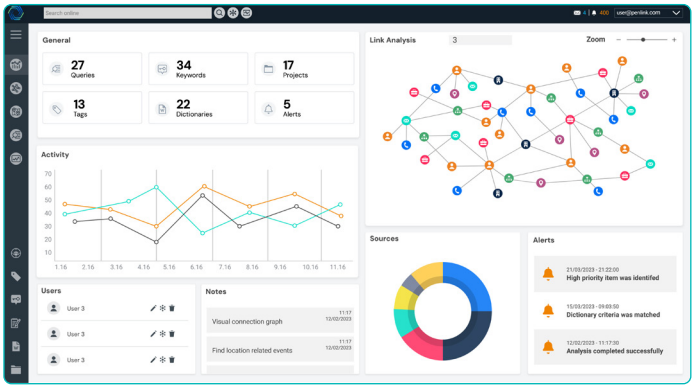
# Digital Intelligence Package for National Security

Tangles

## Comprehensive Digital Intelligence

Penlink equips the defense and intelligence communities with a cutting-edge digital intelligence platform that enables rapid data collection and analysis, simplifying lead identification, risk assessment, threat detection, and the establishment of crucial connections to gain situational awareness.



### Web Discovery

Enable seamless access to all layers of the web, including the open, deep, and dark web, and public records.

### Simplified AI

Enable fast and accurate identification with video analytics, OCR, speech-to-text conversion, NLP, and more.

### Visual link analysis

Visualize intelligence with advanced charts that They illustrate relationships and connectivity across all inputs.

### Real-time alerts

Establish user-defined triggers to enhance situational awareness across multiple data sectors.

### Identity resolution

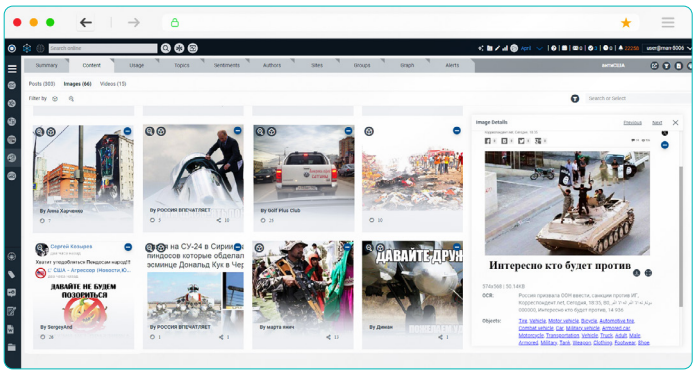
Analyze individuals and entities to uncover hidden threat actors and leads with targeted intelligence.

### Dynamic reports

Generate automated reports presenting an overview. comprehensive and dynamic of the entities, producing actionable intelligence.

## Simplified artificial intelligence

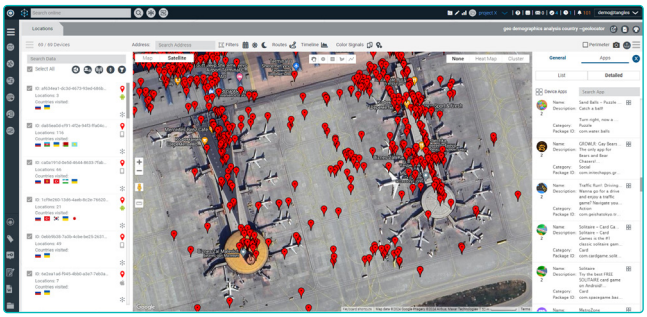
- Analysis image
- Video Analysis
- Recognition optical characters
- Speech to text
- Analysis NLP Entities
- Generator AI



# Protect and defend our nation with Penlink solutions:

## Webloc

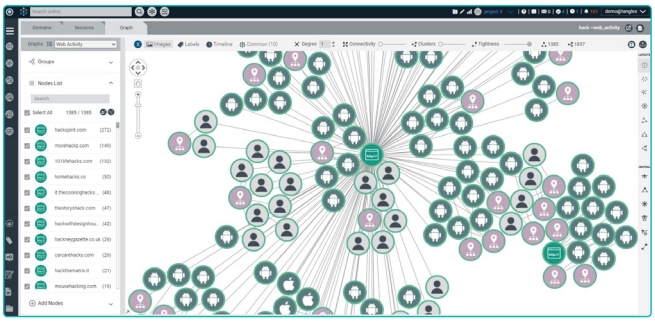
### New standards in location intelligence



National security agencies employ Webloc for advanced geolocation intelligence with global coverage, simplifying investigative and operational strategies with precision. By analyzing billions of data points from
For detailed identity and lifestyle pattern analysis, Webloc enhances situational awareness by automating data correlation with precise, user-defined polygonal geofencing, optimizing accuracy and efficiency. Webloc generates demographic insights, helping to expose hidden connections between threat actors and illicit activities, enabling the detection of anomalies in activity patterns with real-time alerts and ensuring a comprehensive approach to identifying and mitigating potential threats.

## WebEye

### Transform web data into actionable insights.

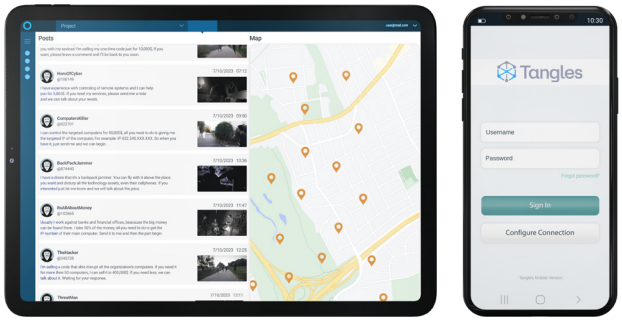


Used by national security agencies worldwide, WebEye offers comprehensive global coverage and utilizes AI-based generative analytics for detailed web page investigations and session extraction.
The browser allows investigators to delve into web activity, offering clues and context through combined results and attributes. Integration with Webloc adds critical contextual information, aiding in the identification of key topics and the discovery of potential threats.

**Elevate your investigations with the power of OSINT, digital forensics, and location-based data, using an innovative platform to accelerate your investigations and deliver actionable insights.**

## Tangles Mobile

Overcome the challenges of limited access.
in real time and fragmentation



## CoAnalyst

Accelerate investigations with the AI solution.
